Jared:

1. Thank you for the quick turn around on the OSRTI draft. OSRTI would send it as official email to IDNR sharing their input. R7 would need to be cc'ed on their input as sent (addressed) to IDNR.
2. I hope to receive Kate's comments by the end of this week and will share with you for anything major or concerning or "eye-catching" suggestions. If her comments are edits or format or such, I was not planning to send them! Unless you like to see those! I agree that we would need to coordinate our consistent message between OSRTI response and the FYR findings! Thanks for thinking about that ☺

Very Respectfully,
Sandeep Mehta, P.E.

Hi Sandeep – Your adjustments look fine to me, and representative of the points made in conversation with IDNR the other week. Is the intent for OSRTI to share these observations directly with IDNR after we pass back our proposed changes?

Also, have you received comments from Kate Garufi on the draft FYR? If Kate does recommend discussion of the groundwater point of compliance issue in the FYR then we will want to make sure that our messaging is consistent between the FYR and these comments sent to IDNR.

Jared:

Hi. HQ had sent a draft (provided below) and then Susan had asked my input for the draft (provided below). Can you review my draft in the email below and let me know today (if possible) what your thoughts are? Thanks.

Very Respectfully,
Sandeep Mehta, P.E.

Subject: RE: DRAFT EMAIL_Vogel Paint and Wax Co Superfund Site -- Follow-up to May 20th Call

Draft for your consideration:

This email is in follow-up to the conference call conducted on May 20th regarding the Vogel Pain and Wax Co, Maurice Iowa, Superfund Site:

Participants for this conference call with IDNR were Region 7 and EPA HQ – OSRTI.

The agenda included discussions on the path forward requirements of ROD or ESD in light of RP's proposal to implement Pilot Study to evaluate whether In-situ Bioremediation (ISB) and permeable reactive barriers (PRB) in the ground would impact and reduce the COCs in the groundwater plume. In addition, the RP also wanted to evaluate the path towards Site Deletion process.

BACKGROUND: Pilot Study Work Plan and North Work Plan: These work plans are currently in the process of implementation for a period of one year to evaluate ISB and PRB process impacts to the onsite COCs. The pilot study also includes implementation of issues and recommendations from the last five-year review report. The combination of these reasons support the path forward towards groundwater cleanup at the site, and possibly, a step forward towards site deletion process.

Future Direction Considerations:

We would like to see your suggestion for revisions to this draft language that we could run by OSRTI before sending to the state.

Importance: High

Susan:

OSRTI has sent the draft email for R7 review. My thoughts on two of their comments is provided below.

Ex. 5 Deliberative Process (DP)

Item 3: See the note above.

Let me know your and Lynn's thoughts.

Very Respectfully,

Sandeep Mehta, P.E.
